

» Support that counts for years.

Nearly 30 years ago we sought out to solve a problem farmers face year after year. And each year since, we have provided our solutions to custom fit tractors, new and old. Command Hydraulics created and patented the PumpDoctor, installed between the PTO pump and the tractor, to help support not only your PTO pump (and extending it's life up to three times), but also your bottom line.

PumpDoctor

Benefits:

- › eliminates vibration and stress on the pump
- › extends pump life by two or three times
- › reduces pressure gauge flutter
- › prevents hose breakage
- › reduces wear and stress on gears and bearings
- › reduces wear and stress on the PTO shaft
- › easy to install and remove
- › saves downtime and operator frustration
- › available for all tractor and pump makes and models
- › Case IH › Kinze › Eaton
- › White › Prince › John Deere
- › and more

› PumpDoctor

How it works

The PumpDoctor is installed between the PTO pump and the tractor - and once installed, the weight of the PTO pump is taken off of the PTO shaft and thus transferred to the tractor frame.

Plus, the PumpDoctor holds the PTO pump rigid to the tractor - which in turn reduces PTO pump vibration and PTO shaft failure.

Additional PumpDoctor Products

PumpDoctor for Roller Pumps

- › Economical support bracket for all roller pumps such as Hypro Pumps

PumpDoctor for Turbo 90 Turbine Pumps

- › Support bracket for Turbo 90 Turbine Pumps
- › Eliminates the need to purchase expensive couplers

PumpDoctor for Gear Pumps

- › Eliminates vibration and stress on the PTO shaft when attached to very heavy gear pumps

Each and every PumpDoctor is hand-built, and built-to-order with quality craftsmanship in our shop in Minnesota. We use only the highest quality of steel and raw materials available, making the PumpDoctor built to last and endure many years of rugged use.
